Abstract

Contents

1 Introduction

This paper studies the cube-chain category $\mathrm{Ch}(K)$ of a precubical set K and its executions, following Paliga and Ziemiański [PZ21] and Ziemiański [Zie19].

Theorem 1.1 (placeholder)**.** *There is nothing to prove here yet.*

Theorem 1.1 is a placeholder. A sample commuting square, to confirm `tikz-cd` renders:

$$\begin{tikzcd}
\square^m \arrow[r, "f"] \arrow[d, "\pi"'] & K \\
\square^n \arrow[r, "g"'] & \mathrm{Ch}(K) \arrow[u, hook]
\end{tikzcd}$$
